SUMMARY

Full Stack developer focus on creating structured, reliable solutions designed for real-world use. I've shipped multiple applications end-to-end, taking ownership from idea to production. Former national-level hockey player, bringing discipline, consistency, and a performance-driven mindset to engineering.

TECHNICAL SKILLS

Frontend: HTML5, CSS3, JavaScript(ES6+), Next.js, React.js, Tailwind CSS
Backend: Node.js, Express.js
Database: MongoDB, PostgreSQL
API & Security: Zod Validation, CORS, RBAC, bcrypt
Automation & Email: Cheerio, node-cron, Resend SDK
AI Integration: Google Gemini LLM, On-demand LLM Calls, DB-level Response Caching, Prompt Design
Tools & DevOps: Git Version Control, Postman, Docker, Vercel, Render
Languages: JavaScript, TypeScript, C++, Python

PROJECTS

Carvio: Personalised Job & Internship Alert System **GitHub | Live**

- Built a full-stack job aggregation platform — Next.js frontend with preference (role, skills, location, stipend) backed by a Node.js/Express REST API with JWT auth, access & refresh tokens, and email verification via Resend
- Engineered a multi-source scraping pipeline using Cheerio across Greenhouse and Internshala, normalising heterogeneous DOM structures into a unified MongoDB schema — ingesting fresh listings on every cron run
- Implemented 3-day TTL index on the jobs collection to auto-expire stale listings, reducing storage overhead and ensuring users only receive current opportunities
- Designed skill + location + stipend-based matching engine delivering personalised inbox alerts via Resend HTML email templates, with data normalisation (e.g. Node.js to nodejs), improving match accuracy

Tech: Node.js, Express.js, Next.js, Tailwind CSS, MongoDB, Cheerio, node-cron, JWT, Resend, TypeScript

Brevis: Privacy-First Anonymous Messaging Platform **GitHub | Live**

- Delivered full-stack anonymous messaging app — Next.js + Tailwind CSS frontend with dynamic rendering backed by a secure Express API; designed for zero identity exposure with JWT session management
- Implemented granular route-level rate limiting: 5 req/15 min (auth), 20 req/min (messages), 10 req/min (thoughts) — and centralised error handling via ApiError, ApiResponse, and asyncHandler across 15+ endpoints
- Resolved end-to-end production issues — CORS configuration, environment management, and deployment pipelines on Vercel (frontend) and Render (backend)

Tech: Next.js, React.js, Tailwind CSS, Node.js, Express.js, MongoDB, JWT, TypeScript, Vercel, Render

AI-Assisted Journal System **GitHub | Live**

- Built a full-stack journaling app with a dynamic Next.js frontend featuring API-driven state management and conditional rendering, connected to an Express backend with Google Gemini LLM emotion analysis
- Implemented DB-level LLM caching: Zod-validated Gemini responses stored in MongoDB on first analysis — eliminating redundant API calls on repeat requests and cutting token consumption by ~40%
- Applied rate limiting (100 req/15 min) and Zod validation on all inputs and LLM outputs to enforce consistent data structures and stable API behaviour under load

Tech: Next.js, React.js, Tailwind CSS, Node.js, Express.js, MongoDB, Google Gemini LLM, Zod, TypeScript

EXPERIENCE

LeetCode - Actively Solving Problems - Arrays, Strings, Linked List, Stack, Queue, Recursion, Dynamic Programming

EDUCATION

B.Tech – Computer Science Engineering 2023 - 2027
G.L. Bajaj Group of Institutions, Mathura

XII - PCM 2021
Kendriya Vidyalaya, Sitapur
